# Limits & Derivatives

May 5, 2022

## 1 Limits

### 1.1 Some algebra

- $\lim_{x \to a} [f(x) + g(x)] = \lim_{x \to a} f(x) + \lim_{x \to a} g(x)$
- $\lim_{x \to a} [f(x) g(x)] = \lim_{x \to a} f(x) \lim_{x \to a} g(x)$
- $\lim_{x \to a} [f(x) \cdot g(x)] = (\lim_{x \to a} f(x)) (\lim_{x \to a} g(x))$
- $\lim_{x \to a} \frac{f(x)}{g(x)} = \frac{\lim_{x \to a} f(x)}{\lim_{x \to a} g(x)}$

### 1.2 Basics

- $\bullet \lim_{x \to a} \frac{x^n a^n}{x a} = na^{n-1}$
- $\lim_{x \to a} \frac{x^m a^m}{x^n a^n} = \left(\frac{m}{n}\right) a^{m-n}$
- $\bullet \lim_{x \to 0} \frac{(x+a)^n a^n}{x} = na^{n-1}$

### 1.3 Trigonometric limits

- $\lim_{x \to 0} \tan(x) = \lim_{x \to 0} \frac{x}{\cos(x)} = 0$
- $\lim_{x \to 0} \frac{\tan(x)}{x} = \lim_{x \to 0} \frac{\sin(x)}{x} = 1$
- $\lim_{x \to 0} \frac{x}{\sin(x)} = \lim_{x \to 0} \frac{x}{\tan(x)} = 1$
- $\lim_{x \to 0} \frac{\sin(ax)}{x} = \lim_{x \to 0} \frac{\tan(ax)}{x} = a$
- $\lim_{x \to 0} \frac{x}{\sin(ax)} = \lim_{x \to 0} \frac{x}{\tan(ax)} = \frac{1}{a}$
- $\lim_{x \to 0} \frac{\sin(ax)}{\sin(bx)} = \frac{a}{b}$
- $\bullet \lim_{x \to 0} \frac{1 \cos(mx)}{x} = 0$
- $\lim_{x\to 0} \frac{1-\cos(mx)}{x^2} = \frac{m^2}{2}$

### 1.4 Exponential & logarithmic limits

- $\bullet \lim_{x \to 0} \frac{e^{ax} 1}{x} = a$

# Left & Right limit

 $\lim_{x\to a} f(x) = l \quad \text{if and only if} \quad \lim_{x\to a^-} = \lim_{x\to a^+} = l$  In other words, the limit of a function at a point a has a definite value if and only if both limits from left and right side are equal.

#### 2 Derivatives

# Differentiation from first principle

Method of finding derivative from the definition.

Consider a function f(x). We say f(x) is differentiable at x = a, if  $\lim_{h \to 0} \frac{f(a+h) - f(a)}{h}$ 

And we write it as f'(a) or  $\frac{df}{dr}$ 

$$f'(x) = \lim_{h \to 0} \frac{f(x+h) - f(x)}{h}$$

2

# 2.2 Algebra of derivatives

• 
$$\frac{d}{dx}(f(x)+g(x)) = \frac{d}{dx}f(x) + \frac{d}{dx}g(x)$$

• 
$$\frac{d}{dx}(f(x) - g(x)) = \frac{d}{dx}f(x) - \frac{d}{dx}g(x)$$

• 
$$\frac{d}{dx}(f \cdot g) = f \cdot \frac{d}{dx}g + g \cdot \frac{d}{dx}f$$
 [Product rule]

$$\bullet \ \, \frac{d}{dx}(f\cdot g\cdot h) = gf\cdot \frac{d}{dx}h \ \, + \ \, gh\cdot \frac{d}{dx}f \ \, + fh\cdot \frac{d}{dx}g \qquad \quad \left[Product \ rule\right]$$

• 
$$\frac{d}{dx} \left[ \frac{f}{g} \right] = \frac{g \cdot \frac{d}{dx} f - f \cdot \frac{d}{dx} g}{g^2}$$
 [Quotient rule]

# 2.3 Derivative of some simple functions

• 
$$\frac{d}{dx}x = 1$$

$$\bullet \quad \frac{d}{dx}kx = k$$

$$dx^n = nx^{n-1}$$

# 2.4 Derivative of Trigonometric functions

• 
$$\frac{d}{dx}\sin(x) = \cos(x)$$

• 
$$\frac{d}{dx}\cos(x) = -\sin(x)$$

• 
$$\frac{d}{dx}\tan(x) = \sec^2(x)$$

• 
$$\frac{d}{dx}\cot(x) = -\csc(x)$$

• 
$$\frac{d}{dx}\sec(x) = \sec(x)\tan(x)$$

• 
$$\frac{d}{dx}\operatorname{cosec}(x) = -\operatorname{cosec}(x)\operatorname{cot}(x)$$

### 2.5 Some other results

These are some results obtained by various methods. Results given below are only for reference

• 
$$\lim_{x \to 0} \left[ \frac{ax+b}{cx+d} \right] = \frac{b}{d}$$

• 
$$\frac{d}{dx}\sin(ax) = a\cos(ax)$$

• 
$$\frac{d}{dx}\cos(ax) = -a\sin(ax)$$

• 
$$\frac{d}{dx}\sin^2(x) = \sin(2x)$$

• 
$$\frac{d}{dx} \left[ \frac{x}{x+1} \right] = \frac{1}{(x+1)^2}$$

$$\bullet \ \frac{d}{dx} \left[ \frac{x+1}{x-1} \right] = -\frac{2}{(x-1)^2}$$

• 
$$\frac{d}{dx} \left[ \frac{\sin(x)}{x} \right] = \frac{x \cos(x) - \sin(x)}{x^2}$$

### 2.6 Some needless proofs..

$$\lim_{x \to a} \frac{x^n - a^n}{x - a} = \lim_{h \to 0} \frac{(a+h)^n - a^n}{a+h-a}$$

$$= \lim_{h \to 0} \frac{\left(a^n + {}^nC_1a^{n-1}h + {}^nC_2a^{n-2}h^2 + \dots + h^0\right) - a^n}{h}$$

$$= \lim_{h \to 0} \frac{na^{n-1}h + {}^nC_2a^{n-2}h^2 + \dots + h^n}{h}$$

$$= \lim_{h \to 0} \frac{h\left(na^{n-1} + {}^nC_2a^{n-1}h + \dots + h^{n-1}\right)}{h}$$

$$= na^{n-1}$$
